## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8 and 11-16, drawn to a recombinant nucleic acid molecule comprising a polynucleotide encoding a protein or fragment thereof having beta-glucosidase activity, a vector, host cell/plant, and host cell/plant transformation methods.

Group II, claim(s) 9, drawn to a polypeptide.

Group III, claim(s) 10, drawn to an antibody.

Group IV, claim(s) 17-22, drawn to a method for identifying a hydrolyzed compound and the compound.

Group V, claim(s) 23, drawn to a kit comprising a polynucleotide.

Group VI, claim(s) 23, drawn to a kit comprising a polypeptide.

Group VII, claim(s) 23, drawn to a kit comprising an antibody.

2. The inventions listed as Groups I-VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the recombinant nucleic acid molecule comprising a protein having beta-glucosidase activity operably linked to a heterologous promoter of Applicant's claim 1 is taught in the prior art as evidenced by Lefebvre et al (WO 98/05760). Lefebvre et al teach a recombinant nucleic acid molecule comprising an isolated DNA encoding a protein having beta-glucosidase activity operably to a heterologous promoter and host cell comprising said recombinant nucleic acid molecule (see at least pages 4-6).

Art Unit: 1638

Furthermore, the special technical feature of Group I that is not recited in any of the other groups is considered to be the isolated nucleic acid, vectors and plant transformation methods.

The special technical feature of Group II that is not recited in any of the other groups is considered to be the isolated polypeptide.

The special technical feature of Group III that is not recited in any of the other groups is considered to be an antibody.

The special technical feature of Group IV that is not recited in any of the other groups is considered to be a method for identifying a hydrolyzed compound.

The special technical feature of Group V that is not recited in any of the other groups is considered to be a kit comprising a polynucleotide.

The special technical feature of Group VI that is not recited in any of the other groups is considered to be a kit comprising a polypeptide.

The special technical feature of Group VI that is not recited in any of the other groups is considered to be a kit comprising an antibody.

Therefore, for all the reasons discussed above, inventions I-VII lack unity.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

Art Unit: 1638

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
